

HomeHero

Commercialisation Strategy

Monetisation, launch model, go-to-market, conversion, and growth plan

Prepared for product planning and investor / founder discussion

Version 1.0 | 04 June 2026

Recommended commercial model: 30-day full-access trial -> paid family subscription, with limited free fallback

This document translates the HomeHero product concept into a practical commercialisation plan. It assumes HomeHero is a privacy-first, family-friendly app that makes household work visible through Home Value, appreciation, Kids Mode, and configurable dashboard modes.

1. Executive summary

HomeHero should not launch as a traditional freemium app with a permanently useful free tier and a feature-restricted premium tier. The stronger approach is a full-experience trial that lets a family experience one complete household cycle before asking them to pay.

- **Recommended model:** 30-day full-access free trial, followed by a paid HomeHero Family subscription.
- **Trust layer:** after the trial, users should retain a limited free fallback mode so they can view past data and continue minimal use without feeling locked out of their own family records.
- **Primary paid promise:** voice logging, Home Value reports, mental-load visibility, task take-over suggestions, family quests, appreciation, and household history.
- **Core positioning:** less reminding, more appreciation, and a clearer view of the work that keeps home life running.
- **Monetisation principle:** do not monetise shame, guilt, child pressure, or family tension. Monetise convenience, insight, planning, and emotional recognition.

Commercial thesis

HomeHero should prove value by showing a household its first meaningful Home Value report. The conversion moment should happen after users have seen what the app reveals across a week or month, not before they understand the product.

2. Product context and value proposition

HomeHero sits between a chore tracker, a family organisation tool, a kids motivation app, and a household wellbeing product. Its differentiator is that it treats invisible household work as visible, valuable, and shareable without making the app feel like a blame dashboard.

Value pillar	Commercial meaning	Paid feature opportunity
Home Value	Turns unpaid household work into an understandable economic signal.	Monthly Home Value reports, trend history, custom rates, export.
Invisible work	Makes planning, remembering, school forms, emotional support, and admin visible.	Mental-load insights, recognition mode, smart categorisation.
Teamwork	Gives adults practical ways to take over tasks without being accused.	Helper Mode, task take-over suggestions, recurring responsibilities.
Kids motivation	Turns small household contributions into missions, points, badges, and quests.	Advanced Kids Mode, family quests, optional pocket-money mode.
Appreciation	Reduces conflict by recognising work, not only measuring it.	Thanks screen, appreciation cards, weekly family wins.

3. Monetisation models considered

Model	Description	Fit for HomeHero	Recommendation
Paid upfront	User pays before using the app.	Weak for a new family app; users need to see the	Avoid at launch.

		weekly/monthly insight before paying.	
Classic freemium	Basic features free forever; premium features paid.	Good for growth but risks making the free app feel like a simple chore tracker.	Do not use as the main positioning.
30-day full trial -> paid	Full app free for one month, then paid subscription required for full use.	Strong fit; families need time to form a habit and see Home Value reports.	Recommended.
Trial + limited free fallback	Full trial, then limited free mode if user does not subscribe.	Best trust balance; users do not lose access to family data.	Recommended launch model.
Ads	Free app funded by advertising.	Poor fit due to children, privacy, and sensitive household data.	Avoid.
In-app purchases	One-off purchases for themes or packs.	Useful later, but should not pressure children.	Optional later add-on.
B2B employer wellbeing	Employers offer HomeHero as a family wellbeing benefit.	Interesting future channel after consumer proof.	Phase 3/4 opportunity.

4. Recommended model: 30-day full trial plus limited fallback

The recommended launch model is simple: give families the complete HomeHero experience for 30 days, then ask them to subscribe to continue full functionality. A limited free fallback should remain available to preserve trust and reduce the feeling of data lock-in.

Stage	User access	Commercial purpose
Day 0-30: Full trial	All core features unlocked: household setup, unlimited logging, dashboard modes, Home Value, weekly reports, Kids Mode, family quests, recurring tasks, and AI/voice features if available.	Let the family experience the full value proposition before payment.
After trial: Limited free fallback	View past data, basic dashboard, limited monthly task logging, limited thanks, and basic family members.	Preserve trust, enable reactivation, and avoid users feeling their family history is held hostage.
Paid: HomeHero Family	Full access to logging, history, reports, AI, voice, dashboard modes, mental-load insights, take-over suggestions, Kids Mode rewards, and exports.	Main recurring revenue engine.

Limited free fallback after trial

Feature area	Limited free fallback	Paid HomeHero Family
Task logging	Up to 10 tasks per month	Unlimited
Family members	1 adult + 1 child, or limited household size	Unlimited family members
History	View existing data; new analytics limited	Unlimited history and trend analytics

Home Value	Basic current month total only	Detailed by person, category, display group, week, and month
Appreciation	2 thanks per month	Unlimited thanks and AI-generated appreciation cards
Kids Mode	Basic task list and simple badges	Family quests, custom badges, rewards, pocket-money mode
AI / voice	Not included	Included where technically available
Reports / export	Not included	Monthly reports and PDF/CSV export

5. Pricing strategy

The pricing should feel like one household subscription, not a separate payment for every family member. Keep launch pricing simple and avoid multiple tiers until user behaviour is validated.

Plan	USD launch price	AED launch price idea	Notes
Monthly	\$4.99/month	AED 19.99/month	Simple low-commitment option.
Annual	\$39.99/year	AED 149.99/year	Best-value plan; roughly 8 months for the price of 12 monthly payments.
Founding Family annual	\$29.99 first year	AED 99-119 first year	Limited launch offer to create early adoption.
Lifetime founder	\$79-99 one-time	AED 299-399 one-time	Optional limited early supporter offer; avoid making this permanent.

Platform fee assumption: as of June 2026, Apple offers a Small Business Program with a reduced 15% commission for eligible developers up to defined thresholds, and Apple supports auto-renewable subscriptions. Google Play is also changing service fee and billing-choice models in 2026. These rules should be re-checked before launch and by market. Sources are listed in Section 15.

6. Conversion funnel and paywall timing

The paywall should appear after HomeHero has created a clear emotional and practical moment of value. Do not paywall the first screen. Do not ask for money before the user understands the concept.

Moment	Trigger	Suggested message
First weekly report	User completes 7 days or logs enough tasks for first report.	“Your family created AED 940 of home value this week. Continue tracking the work that keeps home life running.”
Voice logging attempt	User taps voice logging after trial or outside paid plan.	“Turn spoken notes into tasks with HomeHero Family.”
Monthly report	End of free month.	“Your month with HomeHero: tasks completed, home value created, thanks sent, and quests completed.”

Kids rewards	User enables custom quests or pocket-money rules.	“Create family quests, badges, and rewards with HomeHero Family.”
History view	User tries to view older trend analytics.	“Unlock monthly trends and full Home Value history.”

Recommended day-30 conversion screen

Headline: Keep your home teamwork going.

Body: Your free month showed what it takes to run your home. Continue with HomeHero Family to keep tracking home value, sharing tasks, motivating kids, and celebrating everyone’s contribution.

Primary CTA: Continue with HomeHero Family. Secondary CTA: Stay on limited free mode.

7. Trial design: 30-day activation journey

Timing	Product objective	User experience	Commercial purpose
Day 0	Personalise the app.	Ask: “What should HomeHero help with?” Options: feel recognised, share the load, motivate kids, track home value, reduce reminders.	Maps user to the right dashboard mode and increases relevance.
Days 1-3	Create first win.	Guide user to log 3 tasks and invite at least one family member.	Turns setup into immediate value.
Day 7	Show first weekly report.	Display tasks, hours, Home Value, invisible work, and thanks sent.	First “aha moment.”
Day 14	Reinforce habit.	Show trends and suggest one recurring task or family quest.	Builds routine and perceived value.
Day 21	Introduce planning.	Offer weekly planning and Take Over suggestions.	Shows HomeHero can reduce reminders, not just record tasks.
Day 30	Convert.	Show monthly summary and offer paid subscription.	Conversion moment based on evidence and emotional value.

8. Paid feature packaging

- **Voice logging and AI task splitting:** the strongest paid utility because it removes the friction of manual logging.
- **Home Value reports:** the strongest emotional and economic proof point.
- **Dashboard modes:** Recognition Mode, Helper Mode, Home Value Mode, Planning Mode, and Kids Mode.
- **Mental-load insights:** self-facing visibility based on logged mental-load categories and user baselines.
- **Take Over module:** simple rule-based suggestions at launch; AI-powered smart rebalancing later.
- **Advanced Kids Mode:** family quests, custom badges, rewards, and optional pocket-money mode.
- **Export and history:** monthly reports, PDF/CSV export, and long-term trends.

Feature	Why users pay	Launch priority
Voice logging	Saves time and avoids logging fatigue.	High
Monthly Home Value report	Creates the strongest “look what we actually do” moment.	High
Recognition / Helper modes	Makes the app relevant to different adults without gender assumptions.	High
Family quests	Makes the app fun for kids and improves household engagement.	Medium
Pocket-money mode	Useful for some families but must be adult-controlled and off by default.	Medium
PDF/CSV export	Useful for engaged users and premium perception.	Medium
Theme packs	Optional delight, not a core revenue driver.	Low

9. Go-to-market strategy

HomeHero should launch with an emotionally clear message, not a feature list. The campaign should speak to the feeling that household work is often unseen, while keeping the tone positive and collaborative.

Audience	Message angle	Primary channel	Example content
Working parents	Less reminding. More teamwork.	Instagram, TikTok, parenting communities, app store search.	Short videos showing “what I did today” turning into Home Value.
Mums / primary organisers	Make invisible work visible.	Parenting influencers, blogs, school parent groups.	Mental load and appreciation stories.
Dads / partners	Know exactly how to help.	Short-form video, family productivity communities.	“What can I take over?” demonstrations.
Kids and families	Little tasks, big teamwork.	Parent-led acquisition, not child-targeted ads.	Family quest demos and badge moments.
Employers later	Family wellbeing and working-parent support.	HR benefits, wellbeing platforms.	Pilot with employee wellbeing or parenting benefits.

10. Launch plan

Phase	Goal	Key activities	Success signal
Pre-launch	Validate pain and messaging.	Landing page, waitlist, 20-30 parent interviews, pricing test, prototype demo.	Waitlist conversion and qualitative “I need this” feedback.
Beta	Test household behaviour.	Recruit 50-100 families; monitor logging fatigue, family invites, and weekly report usefulness.	Families complete at least one weekly report.

Soft launch	Validate conversion.	Launch in one or two markets; run 30-day full trial; test annual vs monthly pricing.	Trial-to-paid conversion and retention after first paid month.
Public launch	Scale acquisition.	App Store optimisation, influencer demos, family quest campaign, referral loop.	Sustainable CAC and strong week-4 retention.
Expansion	Add channels.	Employer wellbeing pilots, school/community partnerships, localisation.	Lower CAC and higher annual-plan uptake.

11. Commercial metrics

Metric	Why it matters	Target direction
Activation rate	Shows whether users reach first value.	High percentage logging 3+ tasks in first 3 days.
Family invite rate	Shows whether the app becomes household-level, not individual.	At least one additional family member invited during trial.
Weekly report completion	Core value moment.	Strong completion by day 7 and day 14.
Thanks sent	Measures emotional value, not just task tracking.	Increasing weekly engagement.
Voice logging usage	Key paid feature validation.	High repeat use among active users.
Trial-to-paid conversion	Primary revenue metric.	Measure monthly and annual conversion separately.
Annual plan share	Improves cash flow and retention.	Increase through annual savings and launch offers.
Week-4 and month-3 retention	Proves habit and household value.	Track by household, not only individual user.
Churn reason	Identifies pricing, complexity, or conflict issues.	Collect at cancellation.

12. Commercial risks and mitigations

Risk	Commercial impact	Mitigation
Manual logging fatigue	Users do not reach weekly report; trial fails to convert.	Prioritise quick add, recurring tasks, voice logging, and AI task splitting.
App feels like blame or surveillance	Partner resistance and churn.	Use user-selected dashboard modes, appreciation-first copy, and no gender-based assumptions.
Money framing creates tension	Users misread Home Value as debt or salary owed.	Use “value created” language; allow money view to be hidden.
Kids monetisation concerns	Trust and compliance risk.	No child-targeted purchases; pocket money off by default and adult-controlled.

Privacy concerns	Users hesitate to log household behaviour.	No ads, no selling data, clear privacy settings, export/delete, minimal data use.
Too much feature complexity	Weak onboarding and low activation.	Start with one paid plan and a guided 30-day journey.
Platform fee changes	Revenue model assumptions shift.	Re-check App Store and Google Play rules before launch; model net revenue under 15% and 30% fee scenarios.

13. Platform, children, and privacy considerations

HomeHero should be designed as a trust-first family app. Because the product may be used by children and may process sensitive household behaviour data, the commercial model should avoid ads, avoid manipulative monetisation, and keep purchases adult-controlled.

- **No advertising model:** ads would weaken trust and create avoidable privacy risk.
- **No child-targeted purchases:** pocket money, rewards, and quests should be controlled by adults.
- **Transparent subscription:** users should know when the trial ends and what happens to their data.
- **Data access after trial:** limited fallback mode should allow families to view prior data and export/delete information.
- **Platform checks:** review Apple and Google subscription, fee, billing, and family/children policies before launch.

14. Revenue scenarios for planning

The following is an illustrative planning model only. It is not a forecast. It is intended to show which commercial levers matter most: conversion, annual-plan uptake, churn, and acquisition cost.

Scenario	Active trial households/month	Trial-to-paid conversion	Avg net annual revenue/household	Illustrative annualised revenue
Small pilot	500	5%	\$34	\$10k after one-year cohort scale
Early traction	5,000	7%	\$34	\$143k after one-year cohort scale
Strong consumer growth	25,000	8%	\$34	\$816k after one-year cohort scale
B2B/employer layer	10 employer pilots	Varies	\$12-30 per employee/year	Depends on employer size and activation

Important: the financial model should be rebuilt once real beta data is available. The most important early metrics are not revenue alone, but activation, weekly report completion, household invite rate, and trial-to-paid conversion.

15. Recommended next steps

Priority	Action	Owner / output
----------	--------	----------------

1	Confirm commercial model: 30-day full trial + limited fallback + one paid family plan.	Product decision.
2	Define exact fallback limits after trial.	Pricing and product specification update.
3	Create conversion screens: day 7, day 14, day 30.	UX copy and paywall design.
4	Build a simple pricing test landing page.	Waitlist and pricing validation.
5	Run 20-30 interviews with parents and families.	Pain point and willingness-to-pay validation.
6	Beta test with 50-100 households for 30 days.	Activation, retention, conversion and qualitative feedback.
7	Prepare privacy, children, subscription, and platform compliance review.	Legal/platform checklist before app store submission.
8	Update investor/founder deck with commercial model.	Commercial narrative and assumptions.

16. Sources and platform references

The commercial model should be reviewed again immediately before launch because app store policies, billing options, fees, and children/family requirements can change.

Topic	Reference
Apple small developer commission	Apple Developer - App Store Small Business Program: reduced 15% commission for eligible developers.
Apple subscriptions	Apple Developer - Auto-renewable subscriptions: subscriptions automatically renew until cancelled.
Google Play fees	Google Play Help - Understanding Google Play's lower service fees, updated 04 Mar 2026.
Google Play family policies	Google Play Console - Families policies and requirements for apps that may attract children.

Note: this document is commercial/product guidance, not legal, tax, accounting, or regulatory advice. Obtain professional advice before launch, especially for children's data, in-app purchases, subscriptions, tax/VAT, and consumer protection requirements.
